3. General Specifications:

The Network Video Recorder shall offer both video/audio stream management and video/audio stream storage management. Recording frame rate & resolution in respect of individual channel shall be programmable. The objective is that the images should be a near real time as possible and without any visible time delays in the footage as such the system should ensure that once recorded, the video cannot be altered, ensuring the audit trail is intact and can be used as a nonreportable evidence record.

System shall provide sufficient storage of all the camera recordings for a minimum period of 30 days @ 25 FPS, using H.265/HEVC or AV1 and compression techniques for all cameras. The solution should provide for a backup capability that can utilise the current Departmental backup framework. Recording in real-time mode (25 FPS)/15/12.5/10 or lower FPS as well as in any desired combination must be available in the system. I.E. any camera can be recorded in any quality – Selective or Group of cameras must be available in the system.

The solution shall use a combination of IP enabled cameras. The video shall be compressed using MPEG-4 or better standard and streamed over the IP network to the NVR that should be securely housed in the control room.

The recording resolution and frame rate for each camera shall be user programmable. The area under surveillance shall be monitored and controlled from Central Control Room through workstations and Pan Tilt and Zoom (PTZ) controllers.

Power for all the equipment shall be UPS enabled with minimum 60 minutes or more back up. If any equipment operates on any voltage other than the national grid supply voltage and supply frequency, necessary conversion/correction device for supply shall be supplied along with the equipment. The cameras should be powered by power over ethernet (POE).

All the control equipment e.g. servers, NVR/CAMERA SERVER, NAS/Raid backup device, decoders etc. shall be provided in standard Racks. All the indoor cameras & control equipment shall be suitable for operation from 0° C to 40° C and relative humidity up to 80% non-condensing. Cameras & other equipment, meant for outdoor installations, shall be suitable to work from (-) 10° C to (+) 50° C with RH up to 90% non-condensing This temperature range may be achieved with or without heater. All cameras should be IP66 rated.

4. System requirements

IP Cameras are to be used for image capture. Indoor cameras shall be either with fixed focal length lens or with Pan/Tilt & Zoom lens as per site requirement. All Cameras shall be Day/Night cameras and be infra-red capable. Requirements for functionalities such as Audio, Smart motion detection, Person counting, Vandal resistance, Colour night vision and heat mapping will be clarified during the site inspection.

Housing of all cameras must IP 66 or better rated to allow for operation during sprinkler system activation. These must be integrated by the camera manufacturer. The solution is to provide a facility to watermark, or Digital certify records to ensure tamperproof recording so that these can be used as non-reputable evidence later, if so desired. Expansion of the solution beyond the originally planned capacity should be embedded in the solution enabling administration of the total solution from a common interface or consol.

The recording shall support audit trail feature. All camera recordings shall have Camera ID & location/area of recording as well as Date/time stamp. Camera ID, Location/Area of recording & date/time shall be programmable by the system administrator with User ID & Password. The system must have a user administration facility and ensure the integrity of the solution. All cameras are to be secured to enable only authorised users to view footage. The service provider is to indicate how the system is secured against any unauthorised access including measures that may need to be taken on the existing infrastructure to safeguard the integrity of the entire solution. Supported codecs and compression formats are to be clearly indicated in the bidder's proposal. The NVR's must provide support for RTSP/ONVIF.

In order to optimize the memory, while recording, recordings / IP streams shall be compressed using common industry standards. Once on the network, video and audio can be reviewed on a control room workstation from the NVR/CAMERA SERVER and shall be stored on a NAS/RAID storage device. A long-term backup solution is to be provided enabling retrieval of historic events. Bidders are to indicate whether they can integrate to the existing Departmental backup system.

System shall provide facility of Viewing, Recording & Replay Simultaneously. The offered system shall have facility to export the desired portion of clipping (from a desired date/time to another desired date/time) to external media such as CD, DVD, USB, etc. Viewing of the exported recording shall be possible on standard workstations using standard software like windows media player etc. PTZ Cameras shall have 64 or more pre-defined positions and linked to applicable input alarms. Camera should have the ability to create alarm zones and play recorded sound clips in the event of a trip.

Redundancy/Fail-over feature is required i.e. in case of failure of an NVR/CAMERA SERVER the relevant cameras shall automatically switch over to the redundant NVR/CAMERA SERVER. System shall have provision of WAN connectivity for remote monitoring.

4.1. System design:

Each camera should be connected to a media encoder which shall support minimum dual streams. Alternatively, the camera shall be IP based. The encoders should be capable of producing streams @ 25 fps for each camera for viewing via the network and on monitors and also recording into the NVR/CAMERA /SERVER /Camera servers and NAS box/Raid backup device. Audio-Video streams from individual cameras shall be recorded on respective NVR/Camera Server and subsequently, archived to NAS /RAID backup device. The system must enable capabilities to automatically over-write the old information after a programmable period with the latest image based on a Last in First Out principle.

Encoders shall be Power Over Ethernet (POE) compliant and connected to Layer 2 or Layer 3 switch as per system design using CAT 5/6 Cable. Where feasible fibre optic cable may be deployed however the use existing network infrastructure must be maximised to ensure a cost-effective solution. The Central Control Room workstations are to be supplied and maintained by the bidder along with all the required controllers for camera and system operations. For monitoring purposes, Video monitors/Plasma monitors/Video wall shall be setup with suitable mounting arrangements, as per user supplier requirements. Facility for viewing and controlling all the cameras at various other locations, as required, shall be provided. The bidder is required to provide "video walling capabilities" to avoid streams being limited to a single display.

Monitoring at Local control rooms may be restricted to operation during certain cameras only. The system administrator should be able to configure the system and user access accordingly. Provision should be made to accommodate multiple Control rooms / locations required in the proposed system.

There is a requirement for a Control System with Video Control Software to manage all the data being produced off all the surveillance devices. A database server shall keep track of all configurations & events. This is to enable system administration & management of redundancies etc.

All the workstations in LAN should be capable of provisioning the software to view and control the Cameras, encoders and retrieve the recorded video images from the NVR/CAMERA SERVER/NAS/Raid backup device seamlessly. However, access is to be controlled via user profiles that are administered by the system admin function.

A site visit will be arranged to enable bidders to gain insight into the areas that need to be monitored. This will be finalised during the compulsory tender briefing. Based on our initial investigation the number of devices has been estimated and is detailed in the attached spreadsheet containing the baseline Bill of material which should be used by bidders in compiling the cost estimation.

4.2. Video Surveillance Application Software

The software shall operate on open architecture standards. Digital video (image & audio) surveillance control software should be capable to display and manage the entire surveillance

system. It should be capable of supporting variety of devices such as cameras, video encoders, video decoders, PTZ controller, NVR, NAS boxes/Raid backup device etc.

The software should have inbuilt facility to store configuration of encoders / decoders and cameras. The software should support flexible multi-screen displays mode or scroll mode on the monitor or on preview monitor as per site requirement. The software should be able to control all cameras i.e. PTZ control, Iris control, auto / manual focus, and colour balance of camera, Selection of pre-sets, Video tour selection etc. **Access to SOME devices must be password protected.**

- a. The software is required to generate reports of stored device configuration. The control software is required to provide alarm and alarm log. The log shall be able to be achieved, printed and displayed using a device filter, a device group filter and/or a time window.
- b. The software should have user access authority configurable on per device and per device group basis. The user shall have the facility to request access to any camera and can control the camera for a set period. Control of camera is released upon period expiration.
- c. The system shall provide User activity log (audit trail) with user id, time stamp, and action performed.
- d. The administrator should be able to add, edit & disable users and amend user rights.
- e. The system should be able to export all user permissions to enable auditing.
- f. The users should be on a hierarchical basis as assigned by the administrator. The higher priority person can take control of cameras, which are already being controlled by a lower priority user. There should be minimum 3 hierarchical levels of security.
- g. It should have recording modes viz. continuous, manual, or programmed modes on date, time by device or device group. Modes should be disabled and enabled using scheduled configuration. It should also be possible to search and replay the recorded images via alarm event, date, time and or device group.
- h. It should provide onscreen controls for remote operation of PTZ cameras.
- i. Different recording speeds (fps) and resolution for each recording mode for each camera should be possible.
- j. It should provide programmable alarm detection and recording per device. The objective is to support camera algorithms that are able to detect and track objects, learn the scene, adapt to a changing outdoor environment whilst being to ignore environmental changes including rain, hail, wind, swaying trees and gradual light changes. The settings shall be individually configurable for each alarm per device. This allows the Camera Server to save a captured video prior to the alarm/event, as well as after the alarm/event. Capability to link the actions that are triggered (ie recording time periods and devices, playing of sound clip, etc) to alarm events must be provided.
- k. The software for clients should be browser based for remote users. This is to allow only authorized users to access their assigned system capabilities from any network linked device.
